Integrated Logistics Support refers to a disciplined, structured approach that provides a framework for planning, implementing, and controlling all support activities needed to sustain a system throughout its lifecycle. It encompasses a broad spectrum of activities, including maintenance planning, supply support, training, technical documentation, facilities, and more.

The primary goal of ILS is to deliver a system that is:

- Reliable
- Maintainable
- Available
- Supportable
- Cost-effective

By integrating these elements from the earliest stages of system development, ILS ensures that supportability considerations are not afterthoughts but foundational components.

Key Principles of Integrated Logistics Support

- Early Integration: Incorporate logistics planning during system design and development phases to identify potential supportability issues proactively.
