Elementary edTPA Planning Commentary Example

Context and Student Population

In my third-grade classroom, I have a diverse group of 24 students, including five students with Individualized Education Programs (IEPs), two English Language Learners (ELLs), and several students demonstrating varying levels of reading proficiency. The classroom is culturally diverse, with students representing different backgrounds, which enriches our learning community. Recognizing this diversity, I aim to create inclusive lessons that meet the needs of all learners.

Learning Goals and Objectives

The overarching goal of this lesson is for students to understand the concept of ecosystems and demonstrate their comprehension through a written explanation and a visual representation. Specifically, students will:

- Define key vocabulary related to ecosystems (e.g., habitat, producer, consumer, decomposer)
- Describe the interactions within an ecosystem
- Create a diagram illustrating an ecosystem, including various organisms and their roles

These objectives align with the Next Generation Science Standards (NGSS) for Grade 3, particularly ESS3.C: Human Impacts on Earth Systems.

Instructional Strategies and Activities

To engage students and facilitate understanding, I designed a series of interactive activities:

- Vocabulary Introduction through Visuals and Discussion
 - I will introduce key vocabulary words using images, real objects, and student-friendly definitions.
 - Students will participate in a think-pair-share activity to discuss their prior knowledge of ecosystems.
- Read-Aloud and Guided Discussion

- We will read a science picture book about ecosystems, focusing on how different organisms interact.

- During the read-aloud, I will pause to ask comprehension questions, encouraging critical thinking.

- Hands-On Activity: Building an Ecosystem Model

- Students will work in small groups to build a model of an ecosystem using craft materials.

- Each group will include various organisms and demonstrate their roles (producer, consumer, decomposer).

- Diagram Creation

- Students will draw their own ecosystem diagrams, labeling key components and explaining interactions.

- I will provide graphic organizers to support their visual representation.

These strategies promote active learning, collaboration, and the application of scientific concepts.

Assessment Plan

Assessment is integral to this lesson, and I plan to use both formative and summative methods:

- Formative

- Observe student participation during discussions

- Use exit tickets asking students to define a vocabulary word

- Review group models for understanding of ecosystem interactions

- Summative

- Evaluate students' ecosystem diagrams based on a rubric that assesses accuracy, labeling, and explanations

- Collect written reflections where students describe their model and what they learned

By aligning assessments with learning objectives, I ensure that I can monitor student understanding and adjust instruction as needed.

Differentiation and Support

Recognizing the varied needs of my students, I have incorporated multiple supports:

- For ELL Students
 - Visual aids and bilingual vocabulary cards
 - Sentence frames to support explanations
- For Students with IEPs
 - Modified graphic organizers with simplified language
 - Extended time for activities and assessments
- General Differentiation
 - Flexible grouping for hands-on activities
 - Providing scaffolds and modeling for complex tasks

These adaptations help ensure that all students can access the content and demonstrate their understanding.

Rationale and Reflection

My instructional choices are grounded in constructivist theory, emphasizing active engagement and hands-on learning to deepen understanding of ecosystems. The use of visuals, collaborative activities, and formative assessments aligns with best practices for elementary science instruction.

I selected these strategies to foster curiosity, promote peer learning, and accommodate diverse learners. I anticipate that students will develop a solid understanding of ecosystem components and interactions, evidenced by their diagrams and explanations.

Post-lesson, I will reflect on student engagement levels, understanding demonstrated through assessments, and areas for improvement. For example, if students struggle with the diagram labeling, I may incorporate additional modeling or peer support in future lessons.

Conclusion

Crafting an effective elementary edTPA planning commentary requires clarity, depth, and alignment with standards and student needs. The example provided illustrates how to systematically articulate your instructional rationale, strategies, assessments, and differentiation efforts. Remember, your

commentary should reflect thoughtful planning, pedagogical knowledge, and a commitment to fostering an inclusive learning environment. By following these guidelines and referencing this detailed example, you can develop a compelling planning commentary that strengthens your edTPA submission and showcases your readiness as an elementary educator.
