Answers for Key Accounting Concepts in Copley 11e

Providing precise answers to typical questions encountered in the textbook helps students grasp essential concepts.

1. How do you prepare a trial balance?

Answer:

To prepare a trial balance, list all ledger accounts with their ending balances, debit or credit. Sum the debits and credits, ensuring they are equal. If totals do not match, review and correct errors in recording transactions, posting, or calculations.

2. What are the main types of adjusting entries?

Answer:

Main types include:

- Accrued revenues and expenses
- Deferred revenues and expenses
- Estimated items (e.g., depreciation)

These entries ensure that revenues and expenses are recognized in the correct accounting period.

3. How is depreciation recorded?

Answer:

Depreciation allocates the cost of a long-term asset over its useful life. It can be recorded using methods like straight-line or declining balance. The journal entry typically debits depreciation expense and credits accumulated depreciation.

4. What is the purpose of closing entries?

Answer:

Closing entries transfer the balances of temporary accounts (revenues, expenses, dividends) to permanent accounts like retained earnings, preparing the accounts for the next accounting period.

Practical Applications and Examples

Understanding the practical application of accounting principles is key. Here are some examples:

Example 1: Recording a Sale

Suppose a business makes a sale of \$1,000 cash. The journal entry would be:

- Debit Cash \$1,000
- Credit Revenue \$1,000

This transaction increases assets and owner's equity.

Example 2: Adjusting for Prepaid Expenses

If a company paid \$1,200 for insurance coverage for one year, monthly adjusting entries would be:

- Debit Insurance Expense \$100
- Credit Prepaid Insurance \$100
